

Research Experience for Undergraduates

Department of Chemistry and Biochemistry

Sensors and Sensing: From Molecules to Applications

Florida International University's Department of Chemistry and Biochemistry exposes undergraduate students to interdisciplinary research in the fields of sensing, monitoring and detection through its **Research Experience for Undergraduates program**

Students enrolled in this 10-week National Science Foundation sponsored program will work with faculty and graduate students on cutting-edge research projects in the interdisciplinary field of sensing.

UNIQUE BENEFITS

- A premier program at one of the most rapidly growing public research universities in the southeast United States
- FIU provides an urban and multicultural learning environment
- Diverse faculty with regional interests and a global perspective
- Program provides a \$5,200 summer stipend and covers housing and conference travel expenses

CURRICULUM

Participants will be involved in weekly seminars and workshops focused on ethics in science, professional growth and the role of the scientist in modern society.

CONTACTS

Konstantinos Kavallieratos, Ph.D., Program Director

Application deadline is March 1st. For information, visit chemistry.fiu.edu/undergraduate/reu.
